Introduction:

Working capital is a vital activity of the financial management. Managing working capital refers allocating assets in optimum manner to meet current and short term obligation of the business firm in efficient manner to realized their potential and misappropriation minimize working capital. In case of larger firm they need more focused attention in managing their working capital as, they can raise external funds as and when they require due to their high credit ratings which followed by their ease in raising funds via issue of bond. This requires importance of managing working capital to manage the varying available liquid funds as it affects the company's financial position.

Concept of Working Capital:

"The sum of the current asset is the working capital of a business"- J.S. Mill, this definition of Working capital reflects narrow view, as it includes only the items of current asset, like cash, accounts receivable, inventory, short term investments and marketable securities. In common understanding, all those items are

considered as current assets which can be convertible to cash within a year or less. It is also referred as Gross Working Capital. In practice, this aspect of working capital is not used as it ignores the company's liquidity position.

"Current assets less current liabilities" -Stutely, this definition reflects the broader view of working capital and also termed as Net Working Capital. It is the excess of current asset over current liabilities. completes the picture of company's short term solvency position as it includes current liabilities and represents short term financial health of the company and its ability to use current assets to pay the obligations created the by current liabilities. NWC can have two aspects, positive NWC and negative NWC (CA>CL), then it shows company's potential to invest and prosper. If the company has negative NWC (CL>CA) it reflect company's financial health in trouble and also inefficiency in making payments to the creditors.

Both the concept of WC has its own importance and they are relative in given situations. In common, Working Capital is

that amount which is used to meet day to day expenses and other short term obligations of the company. A company needs optimum amount of working capital to function its operations efficiently. Working Capital management ensures balance of working capital in the company with not too much of working capital as unrequited fund may lose its opportunity cost nor too little working capital fail to meet its current obligations.

About Dr Reddy's Laboratory:

Scientist and innovator Dr. K Anji Reddy established Dr. Reddy's Laboratories with an objective to make medicine accessible to every individual. It is the first Indian Pharma company, with global presence. Dr Reddy has employed approx 20,000 employees working in the dimension to provide 'Good Health' to their customer. The company has approx 190 medications, 60 active pharmaceutical ingredients for drug manufacture, diagnostic kits, and critical care and biotechnology products.

Review of Literature:

Suresh and Choudhary (2020) studied SAIL working capital from the financial year 2015-16 to 2019-20. The study suggested that all the components of working capital are interrelated. Any increase in one component will tend to decrease the other component of the working capital. Study also founded that very high NWC ratio indicates over trading and very low NWC ratio indicates under trading.

Sharma and Kaur (2015) examine the relation between working capital management and profitability of Bharti Airtel Telecom Company over 7 years.

The results revealed that there is negative correlation between liquidity and profitability of the company.

Mahato, J., & Jagannathan, U. K. (2016) focuses on the telecom industry of India covering eight selected telecom industry. The study was conducted for five years to investigate the impact of working capital on their profitability. Study reveals that working capital is vital, and it is necessary to maintain balance between wc. There is significant relationship between profitability and wc. The analysis shows that, ROA has negative relation with ACP, ICP, CCC and current ratio.

Arunkumar O.N. and T.Radharamanan (2012)studied working capital management on profitability of Indian manufacturing firms. The study period was for 5 years and methodology used on this study was correlation and regression analysis. The results of research shows that in correlation analysis profitability has negative relationship between profitability and debtor day, inventory day and creditor day. Regression analysis shows that there is positive relationship between number days of inventory and number of days of account payables.

Nimalathasan, B. (2010) studied the impact of WCM on profitability of on manufacturing selected firms using correlation and regression. Results suggested that cash conversion cycle and ROA are negatively correlated. Paper suggested that, managers can increase profitability of manufacturing firms by reducing he number of day's inventories and account receivable.

Research methodology:

The study is based on secondary data, collected from the published annual reports of Dr. Reddy's Laboratories and, journals, books, newspaper, other publications, various websites etc.

Period of study - The research study covers a period of five years i.e. from financial year 2016-17 to 2020-21.

Analysis of Data:

| Year | 2021 | 2020 | 2019 | 2018 | 2017 |
|---------------|-------|------|------|------|------|
| Current Ratio | 2.40 | 2.42 | 2.90 | 1.91 | 2.02 |
| Quick Ratio | 1.78 | 1.89 | 2.25 | 1.52 | 1.59 |
| Inventory | 4.473 | 5.41 | 5.27 | 5.04 | 5.37 |
| Turnover | | | | | |
| Ratio | | | | | |
| Debt-Equity | 0.07 | 0.07 | 0.07 | 0.22 | 0.20 |
| ratio | | | | | |

Table 1.

Source: Annual Published report of Dr. Reddy's Lab

The Current Ratio indicates the ability of the organisation to meets it current payments. This ratio reflects Short-term solvency position of the organisation. Conventionally, a current ratio of 2:1 is satisfactory. Above table considered reveals that, company is having high CR except for the year, 2018. This represents company's sound short term solvency position as company is having larger portion of current assets relative to its liabilities making current in their payments.

Quick Ratio or Liquid ratio measures the company ability to use quick assets to meet the payment of its current liability. Normally QR of 1:1 is considered satisfactory. The above table reveals company's satisfactory quick ratio, as ratio is more than 1 which reflects company is in position to meet its current liabilities payments quickly as needed without selling any long term assets.

Stock or Inventory Turnover Ratio is an efficiency ratio measuring the management of inventory. Higher turnover ratio reflects company is efficiently generating revenue from its assets. Ratio ranging from 5 to 10 is considered satisfactory. Above table reveal that, from 2017 to 2020 company was efficiently managing its inventory. But in 2021 it was decrease in the ratio which depicts company's inefficiency in managing its inventory.

Debt-Equity ratio is the proportion of debt and equity in the capital structure of the company. A low debt-equity ratio indicates a lower amount of financing by debt and more equity in capital structure. The above table reveal that, company is having consistent debt equity ratio that too at lower rate. This implies that company is having equity base with less borrowed funds that signifies that, company has to pay lesser fixed charges and shareholders have a lot to earn.

Table 6. Source: Annual Published report of Dr. Reddy's Lab

Table 6 depicts that as there is rise in current asset while current liability remains stagnant with the average of 34,377.5 which wider the gap between CA and CL resulting favourable WC and again it shows increase in working capital.

Conclusion:

Working capital is the amount of money a company has available to pay its short term expenses. Companies are persistent to improve their working capital position as shortage of working capital may hinder their liquidity position and company may fail to provide services to its stakeholders.

It is significant to have a appropriate working capital management in any company for smooth running of the their business operations. The prompt payment of current obligations secures the solvency position of the organisation.

The study clearly establishes the relation between various components of the working capital. Increase or decrease in one of the items of working capital may affect working capital accordingly. The company should follow sound working capital management and invest in more profitable resources which increases the profitability of the company. The pattern of working capital has a positive relation with the company's profit earning position.

In this study, overall position of WC of Dr. Reddy's Lab is satisfactory, but company need improvements in its short term borrowings, as from the beginning its shows averagely increasing trends which means, company need to maintain sufficient liquid position to meet

obligation. Even though company has shows positive trend in Increase in WC over last few years then too, it is required to improve the WC position by early collection of receivables and slow down the payables to take benefits of time gaps to meet other obligations, as company has low cash holding positions. Hence, Dr. Reddy's Lab need to adjust working capital.
